Self Paced iOS Syllabus

Syllabus 2023-2024 iOS Programming Course

iOS Programming Bootcamp | 508 Hours

$9,000 - Full tuition.

Course description

Stateless processes or applications can be understood in isolation, without stored knowledge of or reference to past transactions. In contrast, stateful applications and processes can be returned to again and again. At Stateful, we choose to learn together, rather than in isolation.

Our self-paced iOS Bootcamp is designed to provide a flexible and personalized learning experience for aspiring iOS developers. Through a series of modules covering fundamental and advanced iOS development concepts, students will gain practical skills and build their own iOS applications. Our program is structured to allow students to learn at their own pace and on their own schedule. However, they will never be alone in their journey. We have a community of iOS developers and alumni who are available to help when students have questions. All help is delivered live, so they can have real-time conversations with instructional staff and our community.

Course Objectives

Our program is designed to be flexible, allowing students to learn on their own schedule while receiving the support they need from a community of experienced developers. We focus on each individual student and provide personalized feedback, guidance, and support to help them achieve their goals. By the end of the program, students will have gained practical experience and the skills necessary to create their own iOS applications, as well as a network of fellow
